• Perfect for storage of supplies, tools, bins, equipment, gear, products, canisters, boxed, etc.

Shelves are box formed at front and back allowing high capacity storage with minimal deflection. Sides of shelves are triple flanged adding to shelf strength. Compression shelf clips improve overall unit capacity. Posts are punched to allow shelves to be adjusted top to bottom at 1-1/2" on center. Beaded front posts allow use of full shelf width and are common between adjoining units reducing assembly and installation time as well as reducing cost. HOW TO ORDER

BEAM LENGTH: SHELF LENGTH EQUALS THE DISTANCE BETWEEN UPRIGHTS. IT IS DETERMINED BY ADDING THE WIDTHS OF PALLET LOADS PLUS A 5" SIDE CLEARANCE BETWEEN UPRIGHT AND PALLET AND 6" BETWEEN PALLET LOADS. SHELF BEAM CAPACITIES ARE BASED ON A PAIR OF BEAMS SUPPORTING AN EVENLY DISTRIBUTED LOAD.

RACK HEIGHT: ADD THE FOLLOWING FIGURES:

HEIGHT OF PALLET LOADS (INCLUDING PALLET)
+ HEIGHT OF SHELF BEAM
+ 4" MINIMUM VERTICAL CLEARANCE FOR EACH PALLET LOAD

SUM OF ABOVE DIMENSIONS = RACK HEIGHT

FOR UPPERMOST LOAD LEVEL, LOCATION OF SHELF BEAM SHOULD BE 6" LESS THAN FORK TRUCK'S MAXIMUM LIFT HEIGHT. TOP OF BEAMS NEED TO BE AT 2" INCREMENTS.

Wire Containers

- **Move up to 2 tons of material at one time with your forklift truck.**

Cylinder Storage Lockers

- **Provides safe, secure storage for all high pressure compressed gas cylinders and LPG containers.**
- **Tamper resistant, all welded heavy gauge aluminum construction.**

Premium construction resists corrosive elements when stored outside — won't rust or corrode. Wire mesh sides allow for quick visual inspection of the cylinders and prevents dangerous build-up of any flammable gases. Sloped roof sheds water and ice. Cylinders stay clear of ground with heavy duty rack or strong floor plate on vertical storage locker. Horizontal lockers feature divided sections for segregation — adjustable plated steel chain to hold cylinders in place. Vertical unit offers easy to use rack positions for storage of 20 or 33 lb. cylinders. Can be anchored for increased security and stability. Compliance with NFPA 58 code for LPG storage and OSHA 1910.110. Ships fully assembled saving set-up time and money. FOB Shipping Point.

Aerosolv® Aerosol Can Disposal System

- **Provides a solution to the expense of solid waste disposal of aerosol cans.**
- **Complies with EPA regulations 40CFR261.23(a)(6).**

H28225
Aerosolv® Counter makes it easy to count and record the number of aerosol cans punctured.

RCRA regulations require that, unless relieved of pressure, aerosol cans must be packed in a drum and manifested for solid hazardous waste disposal. With Aerosolv®, cans are not solid hazardous waste, but are fully recyclable. Residual liquids, released by Aerosolv® and collected in a drum, may be eligible for reclamation or recycling through a waste handler, resulting in waste minimization credits. 55 gallon drum will collect the contents of over 4000 spent aerosols. Easily operated by hand. With the press of the handle, puncture pin pierces the can – leaves no sharp edges or crushed metal. Made of aircraft aluminum, requiring no maintenance. Filter comprises a coalescing lower portion, which removes airborne organic compounds and an activated carbon upper portion which absorbs odor. FOB Shipping Point.

Powered Stretch Wrap Machines

- **Increase productivity in the shipping department or at the end of a production line.**
- **Complete with a powered turntable and counter-balanced stretch film mast.**

Easy to operate -- simply depress the foot pedal and manually move the mast up and down. The film-wrap tension is controlled with an adjustable, friction-brake assembly. Film placement is controlled manually by moving the carriage assembly up and down on the vertical mast. An easy-to-release, hand operated carriage-brake allows the carriage to move freely making film application fast and simple. The system will accept 10" to 20" material. The unit ships with mast disconnected-simply raise mast and clamp into place. FOB Shipping Point.

The standard manual film wrap delivery can be upgraded to 115V 1-phase AC powered mast option (PMO). The hand held control is used to raise/lower the film while the foot control is used to operate the turntable. Optional Approach Ramp allows the operator to load and unload the machine with a pallet truck.

LOWEST COST PER CYCLE

Our warranties start at **250,000 cycles** for (P) tables, which is by far the best in the industry. We go up from there to **1,000,000 cycles** for (HC) High Cycle Lifts and **3,000,000** cycles for (UHC) Ultra High Cycle Lifts. **This outstanding longevity means lowest cost per cycle and best value for you.**

WE DO THE HARD STUFF!

Because of our continuous R & D programs, we are continually pushing the boundaries of lift table performance. We go well beyond "clean sheet" custom design. Many of these developments can be applied to other customer applications:

- Position control systems with guaranteed accuracy of ± .030"
- Simpler, less expensive position control with ± 1/8" accuracy
- 200 feet per minute down speeds
- Multi-lift synchronization on a single power unit
- "Intrinsically Safe" wiring as a low cost alternative to some explosion proof applications
- Customer control interfaces with sophisticated programmable controllers
- Super large – Super high capacity – Super unusual custom platform and lift configurations

We have many more standard models than shown on these two (2) pages and frequently do custom designs. Please give us your requirements and we will quote an appropriate unit."

• **MSL Series**

• **BFL Series**

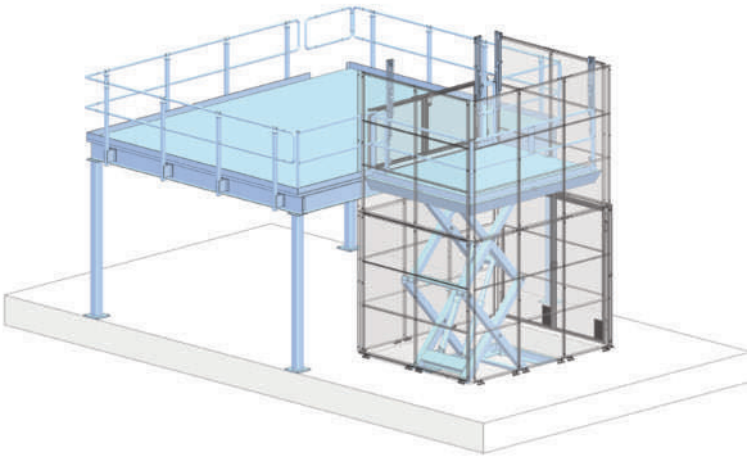

Advantages of Scissors Lifts:

1. Scissors lifts are fully assembled at the factory and not field assembled from kits.
2. Scissors lifts have no external guides and are guided and supported by the scissors mechanism under the platform
3. Scissors lifts do not require licensed elevator installers.
4. Rider scissors lifts are controlled by the rider/operator using a constant pressure pushbutton mounted on the platform. Riders are considered incidental to the cargo.
5. Non-rider lifts are controlled by call/send buttons mounted at each level.

Governing Codes:

The International Building Code for 2015 (printed in June of 2014) sites ANSI MH29.1 Safety Requirements for Industrial Scissors Lifts as the appropriate reference.

Advantages of VRC's:

1. VRC's can be specified in platform sizes that cannot be achieved in scissors lifts.
2. VRC's can move faster vertically than scissors lifts.
3. VRC's are assembled on site so they can be built in tight spaces that deny scissors lift access.

Governing Codes For VRC's & Package Lifts:

The appropriate code for Vertical Reciprocating Conveyors is ASME 20.1. Some locales require elevator inspection and may require the installations be done by licensed elevator installers.

3. Enclosures are an integral part of the unit.
4. Footprint is smaller than a standard VRC.
5. No pit is required.

PERMANENT LIFT MAGNETS

LIFT MAGNET GUIDELINES:

Surface Condition: Magnet face and load surface must be clean and smooth. Capacity ratings listed are on flat, clean and polished steel plate with magnet face in full contact with the load surface. Paint, coatings, scale or other materials between the load surface and the magnet will adversely affect the holding power of the magnet.

Material Thickness: Lifting capacity is lower on thinner materials. Contact dealer for more capacity information.

Material Composition: Magnet capacity is based on lifting low carbon steel. Other materials may reduce lifting capacity.

Load Size and Position: Thin sheets, rough and irregular surfaces, odd shapes and scale all affect holding power adversely and must be considered in establishing a safety factor. The magnet must be positioned on the load center of gravity. Tilted or unbalanced loads significantly affect the holding power of the magnet.

Capacity: Maximum attractive force is approximately twice the rated lifting capacity. Capacity ratings listed are on flat, clean and polished steel plate with magnet face in full contact with the load surface. The above factors should be taken into account when determining appropriated safety factors for a given load. A minimum of 3 to 1 safety factor must be applied based on the actual breakaway force for a given load. **Refer to ASME Standard B30.20 for inspection and operating procedures of Close Proximity Operated Lifting Magnets and read Manufacturers' Operating Manual before using magnet.**

Lifting WEBBING SLINGS

- **Pro-Edge® is the new "standard" for the web.**
- **These strong webbing slings ensure worry-free lifting of heavy loads. Polyester standard. Nylon available - call for pricing.**
- **Extremely strong and wear-resistant, yet soft enough to handle even delicate surfaces.**

Pro-Edge® is 50% tougher than standard webbing. The edges are made with high tenacity twisted tire-cord yarns. It is a scientific fact that twisted yarns are more resistant to cutting and abrasion than untwisted yarns. Since these twists are part of the yarn construction, the cut and abrasion resistance properties of the yarn will not go away after standard wear. Pro-Edge® maintains its strength far longer than most other webbings. Superior abrasion resistance is achieved by controlling the shrink process through a special heat-setting process. This is the same process that produces exceptional abrasion resistance in the manufacture of seat belts. Most other webbings do not use a special heat-setting process but instead dry the webbing using blowers...resulting in less uniform elongation of fibers. Simply put there is not a higher quality "standard" webbing available on the market. Polyester standard. Nylon available -- call for pricing. All slings are measured end to end including eyes and/or hardware. FOB Shipping Point.

JET JLH Series Lever Hoist

- **Dual pawl design.**

All JLH-Series Lever Hoists come with slip clutch style overload protection that prevents lifting or pulling damaging loads beyond the rated capacity of the hoist and when triggered, the overload protection can be reset on site. JET's improved easy free chain design is a two-step, no load, free chaining system. The system permits quicker hoist positioning and take up of slack chain. And it is engineered not to free chain under load. The advanced offset handle design allows for extra clearance between the operator's hand and the load chain. The lightweight design with shorter handle and smaller body are ideal for confined areas and low headroom applications. Grade 100, corrosive resistant plated load chain is a smaller, more compact link that is 20% stronger than Grade 80 load chain. FOB Shipping Point.

Rail Boards

Bluff Rail Boards are a way to bridge the gap between a dock and railcar for safe loading and unloading of shipments. They are custom designed to meet the unique specifications of each dock site, and can work successfully with any type of railcar. Lifting loops and locking rings make the Rail Board easy to place and secure before driving across it with a forklift. Available capacities range from 15,000-90,000 lbs. All-welded steel construction. Worksheet required to design - - call for pricing. Manufacturing time 10-12 working days. FOB Shipping Point.

Edge of Dock Levelers

Bluff's Edge of Dock Leveler provides an easy way to correct the height difference between a dock and trailer bed. With a working range of 5" above and 5" below dock, it accommodates most loading applications. The leveler is positioned by lifting and pulling the handle to the dock floor, and then the latch assembly activates the lip, projecting it forward onto the bed of the trailer as the handle is lifted. When released, the handle automatically returns to its stored position. Conforms to ANSI MH30.1 Standards. Manufacturing lead time 7 working days. FOB Shipping Point.

Edge of Dock Leveler Features

- **Self-Storing handle.**

• ⅝" Thickness.

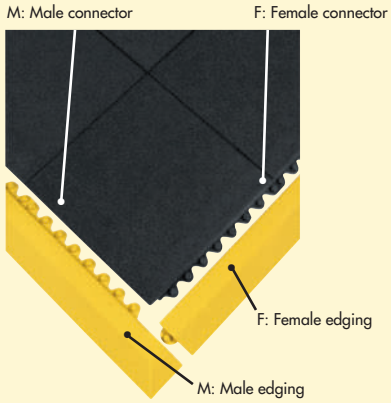

The 24/Seven® is a collection of high performance, 3' x 3', interconnecting rubber anti-fatigue mats. Resilient modular mats are ⅝" thick and tough enough to handle 24/7 shift operations. Because of its modularity, can be combined to cover large flooring areas. Available with a wide variety of options. Three different rubber compounds provide resistance against grease (GR), cutting fluid (CFR), and the most resistant, petroleum-based fluids (NBR). Choose from a solid mat design for drier areas or a perforated 15/16" hole variation to maximize drainage in wet workspaces. GRITSHIELD™ material can also be added to increase traction, if needed.

File Cabinets & Bookcases

tennsco™ Storage Made Easy

Lateral Files

HLPL3672L60

Heavy gauge welded steel construction ensures rigidity and durability for many years of use. Files will accommodate letter or legal hanging files. A mechanical interlock system prevents more than one drawer from opening at a time to eliminate the danger of tipping. Drawers and shelves glide on heavy duty, full extension ball bearing suspensions. A single lock controls all openings. Locks are core removable and master keyed (order keys separately). Each opening is equipped with side-to-side hang rods for the folders. Optional front-to-back rods (H15CR) are available.

Drawers and doors have easy grip, full-width pulls with recessed label holders. Four leveling glides allow the unit to be leveled on uneven floors. To reduce risk of tipping, order two drawer lateral files with counterweights (suffix "W") for all applications except under a work surface in a workstation. Five and six-high units have retractable door(s) with roll-out drawer on top opening(s). Choose an optional laminate top to create a work surface on two and three-high files. Specify Oak or Walnut. Durable powder-coat paint finish available in five colors. FOB Shipping Point.

- **Optional folding rails are available on both sides of the steps to allow easier access for stocking and retrieving.**

The Navigator is ideal for stock rooms and retail environments that are looking for a safer alternative to A-Frame ladders. Rolls on four 4" swivel casters. The All Directional caster design provides 360° turning radius. Comes standard with solid steel steps with abrasive Non-Slip mats (other treads styles available). Durable Gray powder coat finish. Available to be boxed -- call for more information. FOB Shipping Point.

Lenox® Plastic Lockers

- **Patented one-piece box construction.**
- **Corrosion-Proof High Density Polyethylene.**
- **Powder coated stainless steel hinge.**
- **Maintenance-free durability.**

20-Year Warranty

Unlike metal, Lenox Lockers are made of corrosion-proof HDPE material that won't rust or dent. Lenox features a white one-piece box that wraps around with no screws, rivets or mechanical joints. With a box thickness of 3/8" and colored door and frame thickness of 1/2", Lenox Lockers withstand impacts that would easily damage other lockers. The continuous door slide latch is made of 1/2" thick High Density Polyethylene (HDPE) which secures the entire length of the door. Standard lockers include doors with ventilation slots and handles. One and two tier lockers include a double coat hook. A shelf is included with one-tier lockers only. All lockers ship fully assembled saving installation time and money. All locker parts and components carry a 20-year warranty against rust, corrosion, denting, bending and delaminating under normal use. Locker options (sold separately) include End Panels, and Flat Tops which finish exposed white sides of locker. Special order options include key locks, combination locks, coin locks, mesh doors, engraved logos and number plates.
